EDUCATION

B.Eng., Software Engineering — Egyptian Chinese University (ECU)

Expected Jun 2029

GPA: 3.35 / 4.0

Relevant Coursework: Data Structures, Object-Oriented Programming, Digital Logic

Certifications: IEEE — Introduction to Arduino Programming

TECHNICAL SKILLS

Languages: C++, C

Embedded Systems: ESP32, Arduino, Embedded C, Tinkercad

IT & Networking: Firewalls, VM Provisioning, Network Switch Configuration, ERP Systems (exposure)

Developer Tools: GitHub, VS Code, Proteus

WORK EXPERIENCE

IT Intern | Orchidia | Cairo, Egypt

July 2026

- Studied the corporate network domain and firewall configuration, and observed the data center's physical and software infrastructure.
- Provisioned virtual machines for newly hired employees and supported general IT troubleshooting.
- Assisted in replacing switches and reconfiguring device IP addresses for units directly connected to floor printers; gained exposure to ERP department workflows.

Customer Technical Support Specialist | Teleperformance (Comcast Account) | Cairo, Egypt

Jun 2025 – Oct 2025

- Resolved Tier-3 technical escalations for US broadband, network infrastructure, and Xfinity Mobile customers, handling 300+ high-priority cases per week.
- Diagnosed network configuration and connectivity faults across dual lines of business, prioritizing first-contact resolution.
- Acted as an informal technical agent, providing peer-to-peer troubleshooting and workflow guidance.

LEADERSHIP & VOLUNTEERING

HR Member | IEEE ECU Student Branch | Cairo, Egypt

Oct 2025 – Present

- Earned the “Best Member” award for two consecutive months for leadership and member engagement.
- Managed HR operations, streamlining recruitment and onboarding for the student branch.

PROJECTS

BMO AI Voice Assistant | C++, ESP32-S3, OpenAI API

- Built a BMO-themed AI voice assistant on ESP32-S3, integrating GPT, Whisper, and TTS over WiFi with bilingual English/Arabic support.
- Designed OLED face animations and voice activity detection; resolved a FreeRTOS race condition via a shared display-state architecture.

Microcontroller-Based Elevator | C++, Arduino, Tinkercad

- Designed a 3-floor elevator controller using a Finite State Machine in C++, with IR-sensor floor detection accurate to $\pm 2\text{mm}$.

Smart Home Lighting System Simulation | C++, Proteus, Tinkercad

- Led design of an automated lighting system using LDR + ultrasonic sensor fusion, validated across 15+ simulated room states with zero false triggers.

Al-Noor Hospital Management System | C++, Qt 6

- Built a desktop hospital management app in C++/Qt with role-based access (Admin, Receptionist, Doctor), covering patients, appointment scheduling with conflict detection, insurance-based billing, and doctor/clinic scheduling.

LANGUAGES

Arabic (Native)

English (Fluent)
